

Methodology for FL-520 - Citrus, Hernando, Lake, Sumter Counties CoC

Sheltered Population Total

1. What data source(s) was used to produce the total number of people included in the sheltered population (staying in an emergency shelter, Safe Haven, or transitional housing) on the night of the count? Please indicate the percentage of the PIT count derived from each of the sources. (If a source was not used, please enter zero).

HMIS Data	57%
Provider-level surveys	42%
Client-level surveys	0%
Observation	1%
Other	0%
Total	100%

2. Was the CoC able to collect information about the number of people being sheltered on the night of the count from all emergency shelters, Safe Havens, and transitional housing projects listed on the HIC or only some? listed on your HIC or only some?

- Complete census count

3. What information or method(s) was used to de-duplicate the count of the total number of people included in the sheltered population?

- Comparison of personally identifying information (PII), such as name, date of birth, and Social Security Number
- Comparison of unique client identifiers (not PII)
- Interview/survey question(s) with screening questions (e.g., have you already completed a count survey)

Sheltered Subpopulation

4. What data source(s) was used to produce the demographic and subpopulation data included in the sheltered population (staying in an emergency shelter, Safe Haven, or transitional housing) on the night of the count? (select all that were used)

- HMIS Data

Point In Time Methodology for FL-520 - Citrus, Hernando, Lake, Sumter Counties CoC

- Provider-level surveys

5. Was the CoC able to collect information about the demographic and subpopulation characteristics of all sheltered people or only some?

- All sheltered people

6. Looking at the change in your sheltered count from last year's count, please choose up to three reasons that best explains these changes from the drop down list below.

- Change in emergency shelter capacity

Please provide a brief description of these specific factors (500 word limit):

One Emergency Shelter facility converted 9 ES beds to PH beds. These 9 beds were full as ES beds in our 2016 PIT count. Another factor was a 16 bed TH facility would normally be at least 70% full only had 3 people in residence. This facility, as well as other ES & TH facilities are considered high barrier facilities as they have a number of participation requirements, and the homeless often are not eligible or choose not to enter these facilities due to the requirements/rules.

Unsheltered Population

7. What approach(es) was used to count the total number of people included in the unsheltered population during the PIT count. (select all that were used)

- "Night of the count" - known locations

- HMIS

- Service-based count

7a. Were certain areas within the CoC geography specifically excluded because the CoC had reason to believe there were no unsheltered people in those areas?

Yes

7b. How did the CoC select the areas that were included for canvassing?

- Areas were not selected randomly, but an effort was made to use local knowledge to target known locations (e.g., areas with known concentrations of unsheltered homeless people)

7b1. Did the CoC adjust the information in some way (e.g., statistical adjustment or extrapolation) to account for areas within the CoC geography that were not canvassed but where unsheltered people might have been on the night of the PIT count?

No

7c. In areas that were canvassed, did the CoC count all unsheltered people in those areas or a sample of people?

- All people encountered during the count

8. What information or method(s) was used to de-duplicate the total count of people in the unsheltered population? (Check all that apply)

- Comparison of personally identifying information (PII), such as name, date of birth, and Social Security Number
- Comparison of unique client identifiers (not PII)

Point In Time Methodology for FL-520 - Citrus, Hernando, Lake, Sumter Counties CoC

- Interview/survey question(s) with screening questions (e.g., have you already completed a count survey)

Unsheltered Subpopulations

9. What approach(es) was used to collect demographic and subpopulation data about unsheltered people included in the unsheltered population during the PIT count?

- Surveys/interviews of people identified as unsheltered on the night of the PIT count

10. Were all people who were encountered during canvassing on the night of the count or during post night of the count PIT activities asked to complete a survey/interview?

- All people encountered were surveyed

11. What information or method(s) was used to produce an unduplicated total count of homeless people across your sheltered and unsheltered populations?

- Comparison of personally identifying information (PII), such as name, date of birth, and Social Security Number
- Comparison of unique client identifiers (not PII)
- Interview/survey question(s) with screening questions (e.g., have you already completed a count survey)

12. Looking at the change in your unsheltered count from last year's count, please choose up to three reasons that best explains these changes from the drop down list below

- Increased or improved PIT count training
- More volunteers for PIT count
- Other:

Please provide a brief description of these specific factors (500 word limit):

Due to improved outreach, previously unknown homeless encampments were identified in the months leading up to the count and a higher number of unsheltered persons were known and located during the count. A push to increase the number of volunteers going out into the community was successful, and in each of our counties, we had a higher presence than we've had in many years. Training was simplified and improved and provided to the volunteers in the weeks prior to the count.

Point In Time Methodology for FL-520 - Citrus, Hernando, Lake, Sumter Counties CoC

- HMIS data from street outreach and/or other providers

Increase in Outreach to all 4 counties
